

TOF HV STATUS

• Good news

- upgrade to 256 Mb ram
- cleaned disk C, D, F
- implemented INHIBIT tag
- New button running with present value in CAEU crate (no power down)
- Histos caenet error vs. channels
- Clear ~~error~~ histos caenet error menu
- Show monitor file menu
- Show logger file menu
- Catch main window SMAES picture menu
- Fixed the iFix bug on ON/OFF button Δ
 ∇

• Bad news

- In the night between Tue/Wed (at 12:00 PM) system hangs

- A lot of investigation done but no conclusive results:

- permanent disk access

- rtrscan.exe application was running with $\approx 40\%$ CPU time (peak $> 70\%$)

- No special message on logger file

- Improvement on error logger done
